Hand Series

Design & Selection

1. COMMON

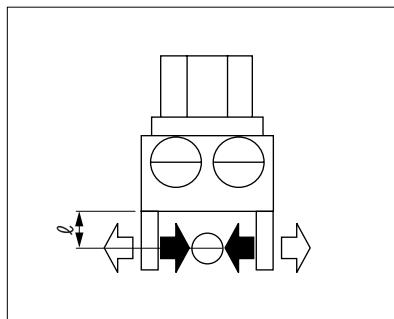

⚠ WARNING

- If the moving workpiece poses a possible risk to personnel or if fingers could be caught in the master key, etc., install a protective cover, etc.
- If circuit pressure drops due to a service interruption or problems in the air source, gripping power drops and the workpiece could drop. Provide position locking measures, etc., so that personnel are not injured or machines damaged.

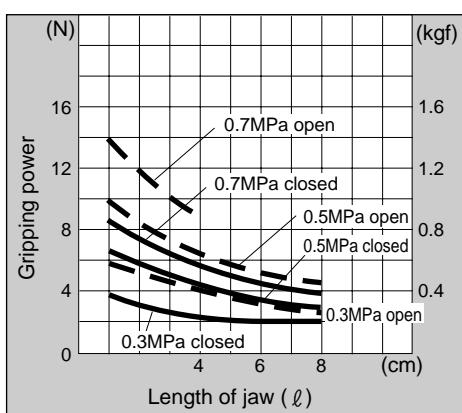

⚠ CAUTION

■ Cautions on gripping power

- The grip is for one master jaw when all master and small jaws contact the workpiece as shown below.

- Performance data indicates the gripping power at hand jaw length ℓ at a supply pressure of 0.15 to 0.7 MPa.

- To obtain gripping power from performance data, if the distance to the workpiece's center of gravity is ℓ when manufacturing the small jaw, gripping power F is expressed as follows

When $\ell = \ell_1$, then $F = F_1$

When $\ell = \ell_2$, then $F = F_2$

Refer to the drawing below.

- The jaw's working max. length can be used within performance data.

When N is used to express the number of jaws as reference for the coefficient for transferring workpiece weight W_L

$WL \times 9.8 : (F \times N) = 1:5$ (only gripping)

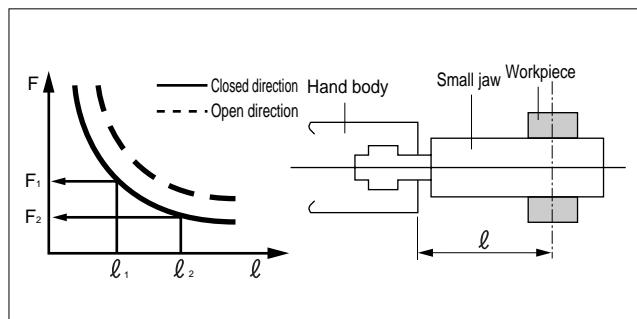

$WL \times 9.8 : (F \times N) = 1:10$ (normal transfer)

$WL \times 9.8 : (F \times N) = 1:20$ (sudden acceleration transfer)

$WL \times 9.8$: Workpiece weight (kg)

F : Gripping power (N)

N : Number of jaws

■ Use as short and light a small jaw as possible.

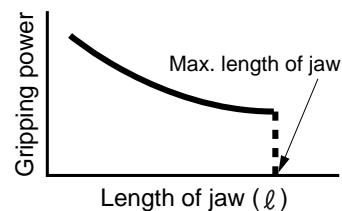

If the small jaw is long and heavy, inertia increases when opening and closing. This may cause play in the master key, and may adversely affect life.

- The small jaw's length must be within performance data.

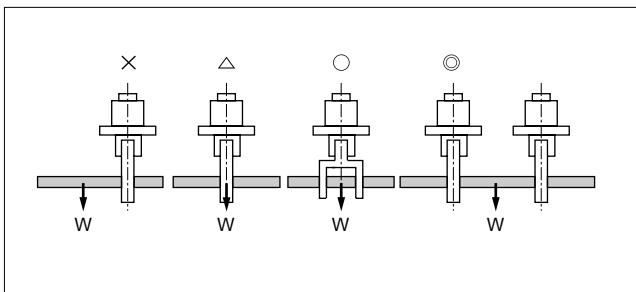

- The weight of the small jaw affects life, so check that it is within the following value.

$W < 1/4H$ (1 pc.) W : Weight of small jaw

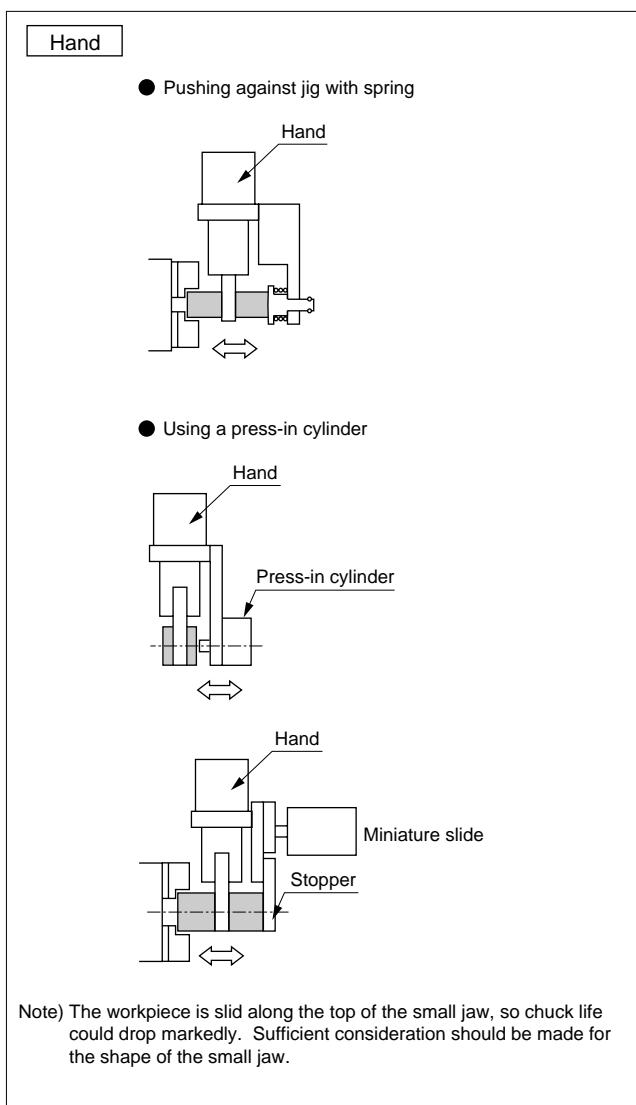

H : Product weight of hand

- When gripping a long object or large workpiece, the center of gravity must be gripped to provide stable prehension. It is also necessary to stabilize prehension by increasing the size or using multiple jaws.

- Select a model that has sufficient power to grip the workpiece weight.
- Select a model that has sufficient opening/closing width for the workpiece size.
- If directly inserting the workpiece into the jig with the hand, consider clearance during design to avoid damaging the hand.

- If the small jaw is not rigid enough, resulting deflection could cause the master jaw to twist or adversely affect operation.

- Adjust the chuck open/close speed with the speed control valve (optional). Play may occur quickly when used at a high speed.

Installation & Adjustment

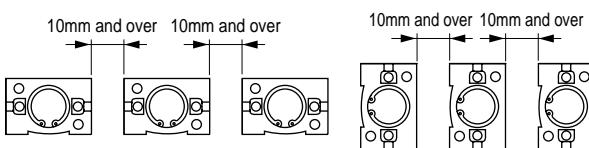

1. COMMON

CAUTION

- If a lateral load or load with a large impact is applied to the master key, play or damage could occur in the master key. Adjust and check that external force is not applied to the master key.
- The cylinder switch could malfunction if there is magnetic substance, such as a steel plate, near the cylinder switch. Keep magnetic substance at least 10mm from the cylinder.

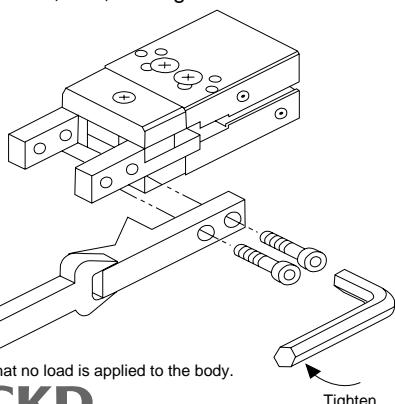

- The cylinder switch could malfunction if cylinders are installed adjacently. Check that the following distances are provided between cylinders.

- If the clamp is operated carefully and slowly as possible, accuracy increases. Repeatability also stabilizes.
- Regularly grease the sliding section of the master key. Periodic replenishment of grease will extend the life of the part.

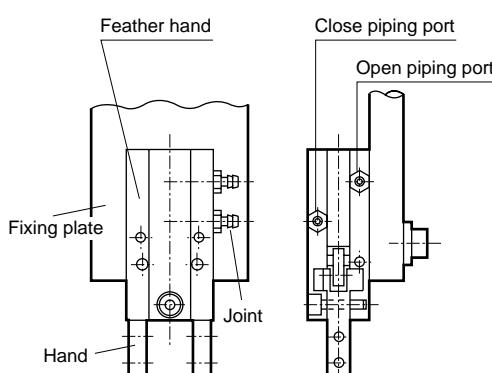

Installing the jaw

To prevent any effect onto the hand, support the master key with a wrench, etc., and tighten so that the master key is not twisted.

2. Installation

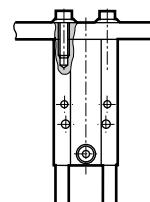

- Do not cause dents or scratches that may worsen flatness or perpendicularity on the fixing face or master key.
- If there is a limit to the thickness direction of the FH series body, the available piping joint will be limited. Refer to the following joints.

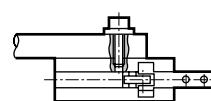

| Model | FH*10 | | FH*12 | | FH*16 | |
|--------------|-----------|----------------------|--------------------------------|-----------|----------------------|--------------------------------|
| Port size | M3 | | M3 | | M5 | |
| Joint | Model no. | Applicable O.D. (mm) | Effective sectional area (mm²) | Model no. | Applicable O.D. (mm) | Effective sectional area (mm²) |
| Straight FTS | FTS4-M3 | Φ3.2-Φ4 | 0.4 | FTS4-M5 | Φ3.2-Φ4 | 2.1 |
| Barbed joint | - | - | - | FTS6-M5 | Φ6 | 4.1 |

- Refer to the section below for details on installing the FH series.

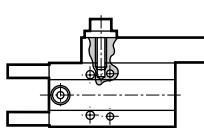

Top installation

Front installation

Side installation

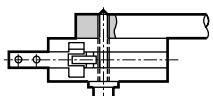

Note) When a switch is provided, screw the bolt into as shown below so the switch is not pressed by the end of the bolt.

Note) Check that the fixed plate does not overlap the master jaw support.

| Model | Applicable bolt size | Max. screw depth (mm) | Recommended tightening torque (N·cm) |
|-------|----------------------|-----------------------|--------------------------------------|
| FH*10 | M3×0.5 | 4.5 | 70 |
| FH*12 | M3×0.5 | 4.5 | 70 |
| FH*16 | M4×0.7 | 6 | 160 |
| FH*20 | M5×0.8 | 7.5 | 330 |
| FH*25 | M5×0.8 | 12 | 330 |

● Use of through hole

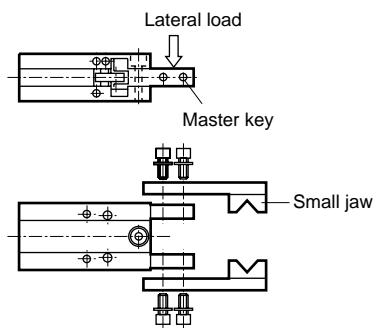

| Model | Applicable bolt size | Recommended tightening torque (N·cm) |
|-------|----------------------|--------------------------------------|
| FH*10 | M3×0.5 | 32 |
| FH*12 | M2.5×0.45 | 32 |
| FH*16 | M3×0.5 | 90 |
| FH*20 | M4×0.7 | 210 |
| FH*25 | M4×0.7 | 210 |

Note) A through hole cannot be used when a switch is provided.

Note) Check that the fixed plate does not overlap the master jaw support.

■ When installing the small jaw, check that a lateral load is not applied to the master key.

■ Tighten with the following tightening torque.

| Screw nominal | M3 | M4 | M5 | M6 | M8 |
|-------------------------------------|------|-----|-----|-----|------|
| Recommended tightening torque (N·m) | 0.59 | 1.4 | 2.8 | 4.8 | 12.0 |

Gripping power performance data

Gripping power that functions to open and closed directions with jaw length ℓ of hand at supply pressure 0.15 to 0.7 MPa is shown.

- Open direction (\leftarrow) - - - (shown with broken line)
- Closed direction (\rightarrow) — (shown with continuous line)

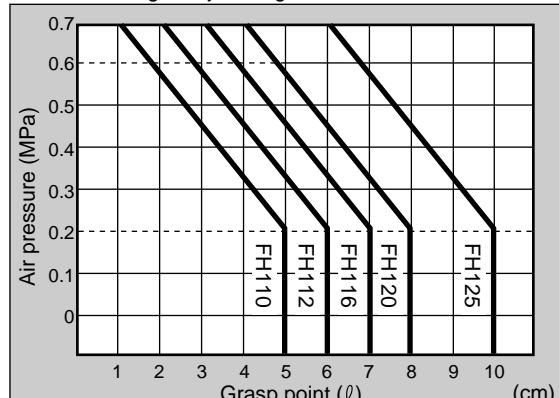

(Note) Single acting type closed side gripping power is decreased by 25 to 30% comparing to double acting type.

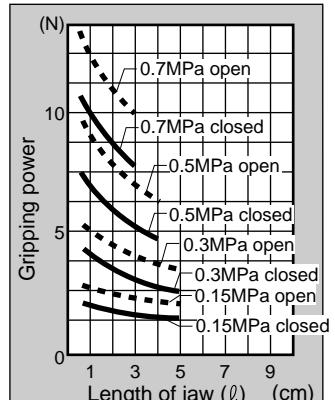

Grip performance data indicates the grip for one jaw.

Since two jaws are used, double the grip in the graph when making a selection.

Gripping power performance data

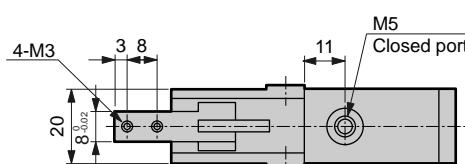

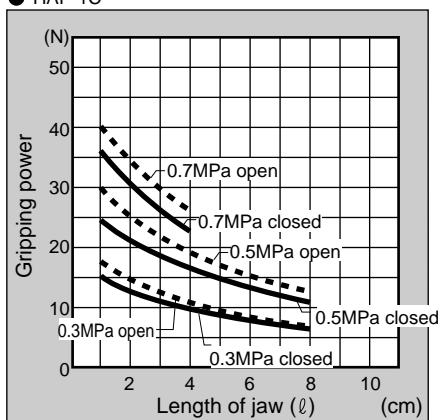

Gripping power that functions to open and closed directions with jaw length ℓ of hand at supply pressure 0.3, 0.5 and 0.7 MPa is shown.

- Open direction (\leftarrow) - (shown with broken line)
- Closed direction (\rightarrow) — (shown with continuous line)

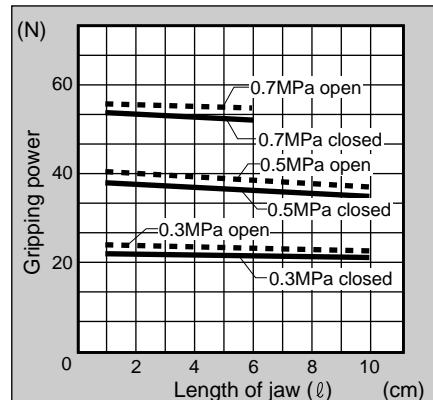

● BHA-01CS1

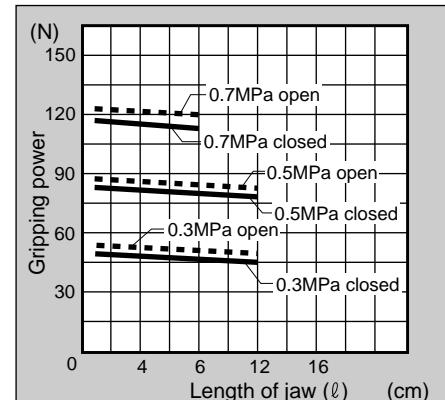

● BHA-03CS1

● BHA-04CS1

● BHA-05CS1

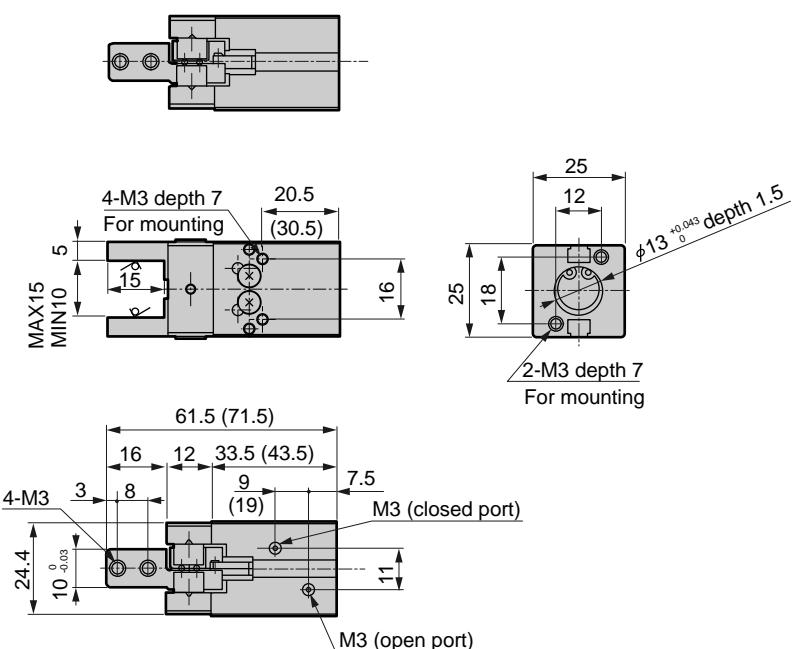

(Note) O type gripping power decreases approximate 20 to 30 % comparing to double acting type to closed direction. C type gripping power decreases approximate 10 to 20 % comparing to double acting type to open direction. Grip performance data indicates the grip for one jaw. Since two jaws are used, double the grip in the graph when making a selection.

Gripping power performance data

Gripping power that functions to open and closed directions with jaw length ℓ of hand at supply pressure 0.3, 0.5 and 0.7 MPa is shown.

- Open direction (↔) - - - - - (shown with broken line)
- Closed direction (→) ——— (shown with continuous line)

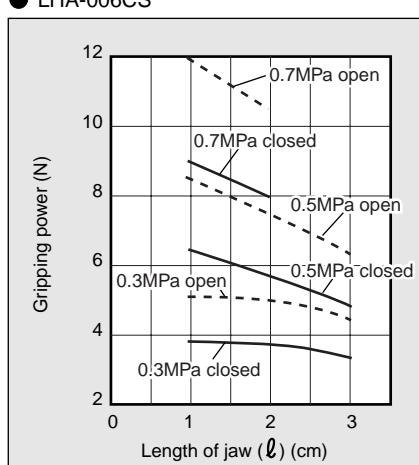

(Note) O type gripping power decreases approximate 20 to 30 % comparing to double acting type to closed direction.

C type gripping power decreases approximate 10 to 20 % comparing to double acting type to open direction.

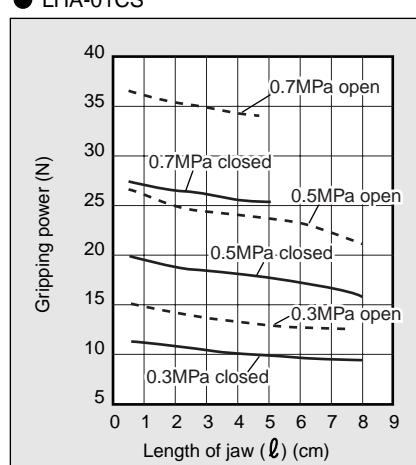

Grip performance data indicates the grip for one jaw. Since two jaws are used, double the grip in the graph when making a selection.

Gripping power performance data

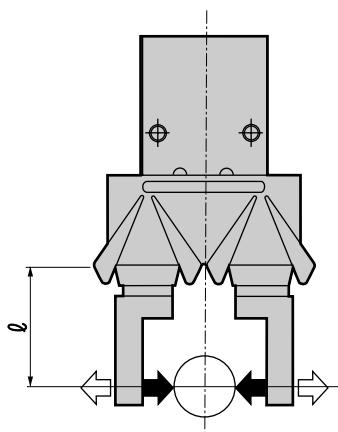

Gripping power that functions to open and closed directions with jaw length ℓ of hand at supply pressure 0.3, 0.5 and 0.7 MPa is shown.

- Open direction (\leftarrow) (shown with broken line)
- Closed direction (\rightarrow) — (shown with continuous line)

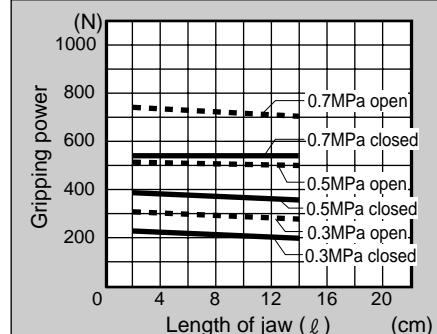

● HKP-32CS

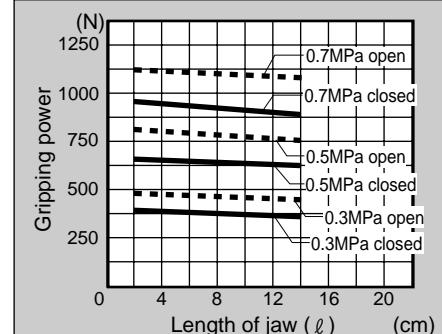

● HKP-40CS

● HKP-50CS

● HKP-63CS

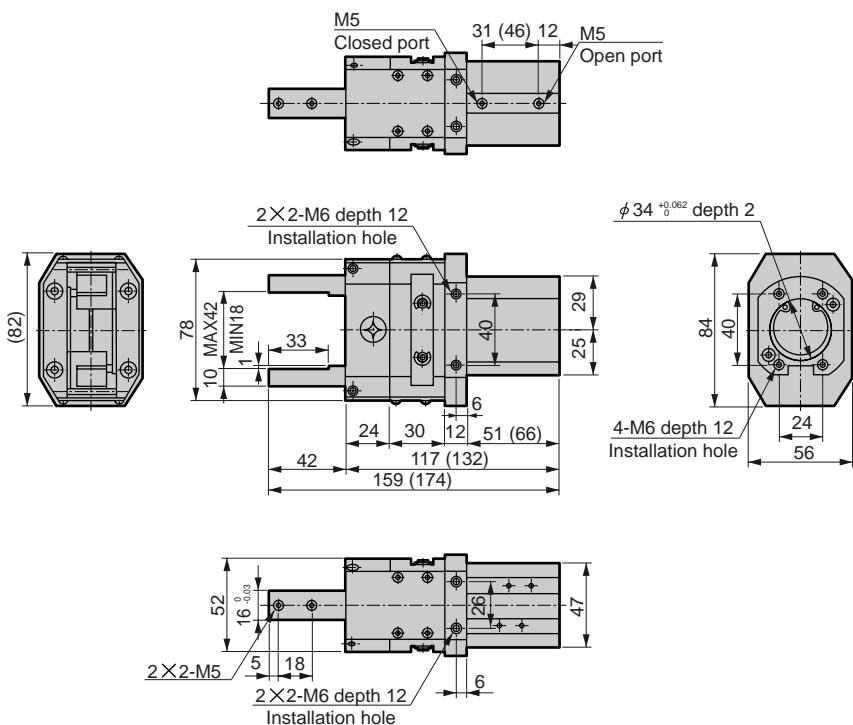

(Note) O type gripping power decreases approximate 20 to 30 % comparing to double acting type to closed direction. C type gripping power decreases approximate 10 to 20 % comparing to double acting type to open direction. Grip performance data indicates the grip for one jaw. Since two jaws are used, double the grip in the graph when making a selection.

Gripping power performance data

Gripping power that functions to open and closed directions with jaw length ℓ of hand at supply pressure 0.3, 0.5 and 0.7 MPa is shown.

- Open direction (↔) - - - (shown with broken line)
- Closed direction (→) —— (shown with continuous line)

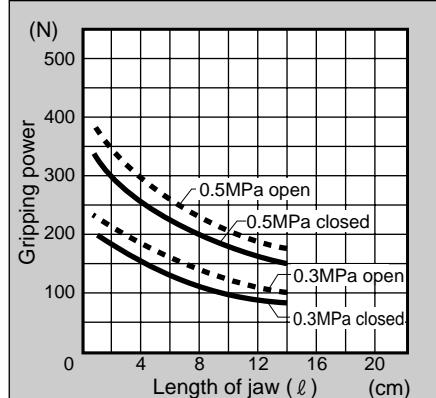

● HEP-3.5CS

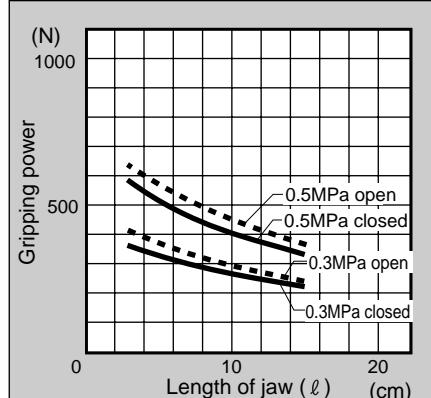

● HEP-4CS

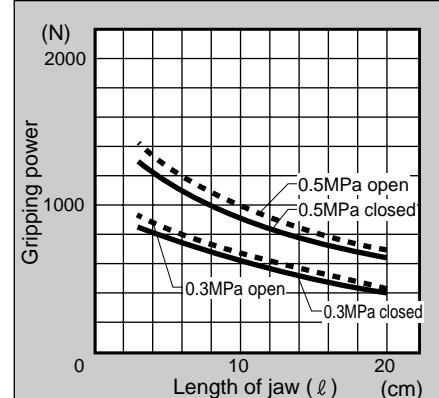

● HEP-5CS

● HEP-6CS

● HEP-7CS

(Note) O type gripping power decreases approximate 20 to 30 % comparing to double acting type to closed direction.

C type gripping power decreases approximate 10 to 20 % comparing to double acting type to open direction.

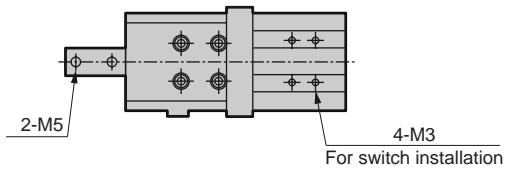

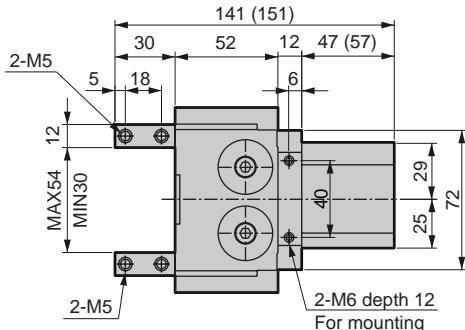

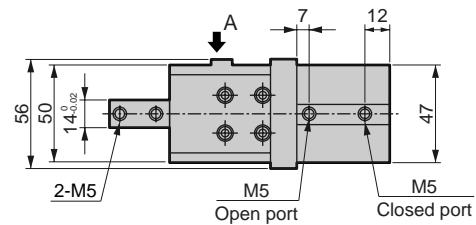

Grip performance data indicates the grip for one jaw. Since two jaws are used, double the grip in the graph when making a selection.

Gripping power performance data

Gripping power is shown per length of ℓ hand jaw at supply pressure 0.3, 0.5 and 0.7MPa.

- Both open direction (\square) closed direction (\blacksquare)
— (Shown with continuous line)

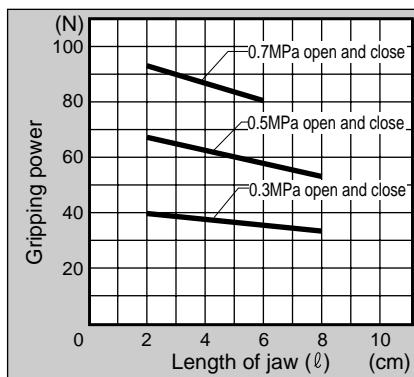

(Note) Grip performance data indicates the grip for one jaw. Since two jaws are used, double the grip in the graph when making a selection.

Gripping power performance data

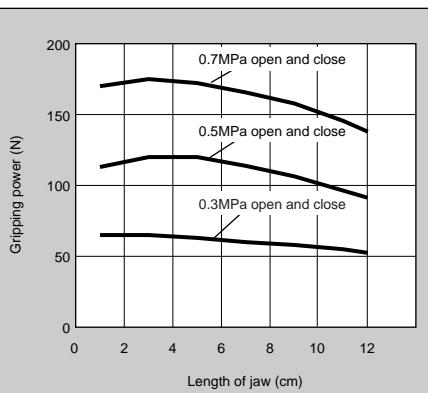

Gripping power that functions to open and closed directions with jaw length l of hand at supply pressure 0.3, 0.5 and 0.7 MPa is shown.

- Both open direction (↔) closed direction (→)
- (Shown with continuous line)

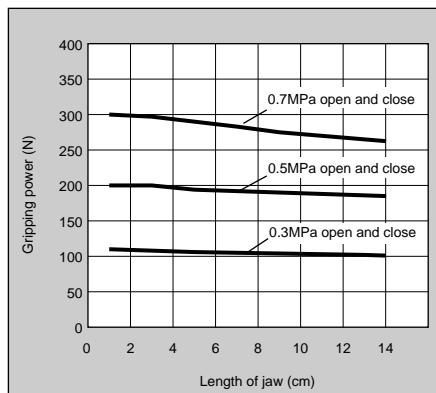

(Note) Grip performance data indicates the grip for one jaw. Since two jaws are used, double the grip in the graph when making a selection.

| Output method | - | NPN output |
| Power voltage | - | 10 to 28 VDC |
| Load voltage/current | 10 to 30 VDC, 5 to 20 mA (Note 1) | 30 VDC or less, 100mA or less |
| Light | LED (ON lighting) | |
| Leakage current | 1mA or less | 10 μA or less |
| Maximum shock resistance | 980m/s ₂ | |
| Lead wire | Standard 1m (oil resistant vinyl cabtire cable 2-conductor 0.2mm ²) | Standard 1m (oil resistant vinyl cabtire cable 2-conductor 0.2mm ²) |

Note 1: Max. load current above: 20 mA at 25°C.

The current will be lower than 20mA if ambient temperature around switch is higher than 25°C. (5 to 10mA with 60°C)

Small jaw

● Material: Iron, engineering plastic

Features

A variety of small jaws is available to match user machining needs.

● Socket and spigot section machined

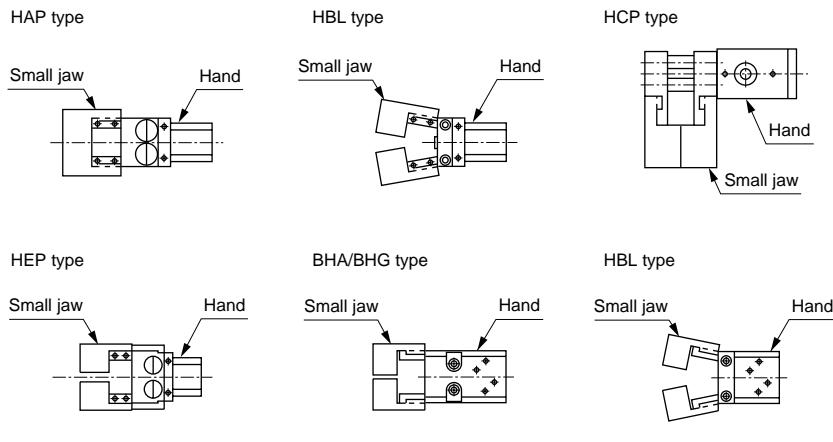

Standard section (socket and spigot section) machined.

Wide series variation to select according to workpiece shape and dimension.

● 2 types of materials for small jaw

Iron (S50C) and engineering plastic (MC nylon) are available according to material and working conditions of workpiece.

Applicable model for standard small jaw

Small jaw applications

| Hand type applications | | |
|--------------------------------|---|-----------------|
| Raw jaw | Compact workpiece | Large workpiece |
| | | |
| Miscellaneous shape workpieces | Vertical grasp (inside tensile workpiece) | Vertical grasp |
